SEO Audit — lorinczi.com

Business type: E-commerce (Shopify) · Handcrafted & custom fine jewelry **Date:** 2026-06-18 ·
Market: United States **Data sources:** DataForSEO (live), Google Lighthouse, live site crawl

SEO Health Score: 74 / 100 — “Healthy plumbing, empty pipes”

Category	Score	Weight	Notes
Technical SEO	80	22%	Clean Shopify, fast TTFB (19ms), valid sitemaps, canonical, HTTPS
Content Quality	62	23%	Good copy, but thin footprint vs. competitors
On-Page SEO	75	20%	Strong product titles/meta; homepage OG mismatch
Schema	80	10%	Product/Offer/Breadcrumb/Brand present; no Review/Rating
Performance (CWV)	70	10%	LCP 1.34s good; CLS 0.161 fail; 3.27MB page
AI Search Readiness	90	10%	agents.md, llms.txt, UCP/MCP — best-in-class
Images	80	5%	Alt text present

One-sentence diagnosis: The site is technically well-built and uniquely prepared for AI/agentic search, but it has **zero keywords in Google’s top 10** and an estimated **~8 organic visits/month**. This is an *authority + content-depth + domain-age* gap, not a technical one. The fix is concentration, not reconstruction.

The hard numbers (DataForSEO, live)

- **23 ranked keywords**, all marked `is_new` — a fresh entrant Google is still evaluating.
- **Best position: #22**. Nothing on page 1. Most rankings sit at #30–#100.
- **Estimated organic traffic value: ~\$20/mo**. Effectively pre-traffic.

- **Realistic competitors** (not Tiffany/Zales — those are noise): **josephjewelry.com** (11,794 keywords), **taylorcustomrings.com** (8,597), **jewelrybyjohan.com** (14,651). These custom-jeweler peers rank 50–100x more keywords. The gap is content volume, not quality.

The biggest opportunity

The `/collections/wedding-rings` page is **already ranking for 20+ “custom wedding band/ring” keywords** — but all of them are stuck at **positions 73–125**:

Keyword	Volume	Current rank
custom women’s wedding rings	480	#96
custom women’s wedding band	480	#86
build wedding band	390	#93
wedding rings custom made	390	#96
custom wedding band design	320	#99
custom wedding bands for her	320	#117
wedding band makers	210	#125
custom band ring	170	#77

One page is trying to rank for 20+ commercial-intent terms worth ~4,000 combined monthly searches. Google has noticed it (indexed and ranking) but doesn’t yet consider it authoritative enough to promote. Concentrating effort here is the single highest-leverage move on the site. Moving this cluster from page 8 to page 2–3 is realistic within 60–90 days; page 1 is the 6-month goal.

Product-level rankings are healthier and closer to breaking through:

- “scroll and vine bracelet” (vol 720) → #81
- “thorn earring” (110) → #30
- “star sapphire bracelet” (140) → #36
- “silver wave ring” (390) → #85

Prioritized Action Plan

CRITICAL (THIS WEEK)

Nothing is blocking indexing — no penalties or crawl blocks. (*Verified: robots.txt allows crawl, canonicals correct, SEO Lighthouse = 100.*)

HIGH (WITHIN 2 WEEKS)

1. Rebuild the `/collections/wedding-rings` page into a real ranking asset. It ranks for 20+ terms but is almost certainly thin (collection grid + a line of text). Add 400–600 words of genuine, first-person content: how I design a custom band, materials, the heirloom/redesign angle, process, timeline. This is the page most likely to deliver traffic.

- *First principle:* Google ranks pages it can read intent + depth from; a bare grid can't compete with a competitor's 600-word category page.
- *How you'll know it failed:* avg. position for the wedding-ring cluster hasn't improved in 8 weeks despite content + internal links.
- *Leading indicator:* watch the cluster's average position in GSC weekly — movement from ~#95 to ~#60 confirms it's working before any traffic shows.

2. Add Review / AggregateRating schema to products. Product pages have Product + Offer + Brand + Breadcrumb schema (excellent) but no `aggregateRating` or `Review` — so no star ratings in the SERP. Stars lift CTR 15–30%. (Requires collecting reviews — a Shopify app like Judge.me / Loox emits the schema automatically.)

- *Falsifiable:* re-run schema validation in 2 weeks; stars should appear in Google's Rich Results Test.

3. Fix the homepage Open Graph mismatch. The `<title>` /meta description are sharp, but `og:title` is just "Lorinczi Jewelry" and `og:description` is the old generic copy. Also `og:image` is served over `http://SMARTPANTS_PRESERVED_297` (insecure) on an HTTPS site.

- *Why it matters:* every social/Slack/iMessage share uses the weaker, off-brand copy and may drop the image.
- *Fix:* align OG tags with the meta description and switch the image URL to `https://.SMARTPANTS_PRESERVED_307`

MEDIUM (WITHIN 1 MONTH)

4. Fix CLS (0.161 — over Google’s 0.1 threshold). Layout shifts during load (desktop measurement; mobile is usually worse). Usual Shopify culprits: images without width/height, web-font swap, or an injected app banner. A confirmed Core Web Vital failure.

- *Leading indicator:* re-run Lighthouse — target CLS < 0.1.

5. Trim page weight (3.27MB). Heavy for a jewelry homepage. Lighthouse flagged TikTok, Facebook, GTM, DoubleClick, plus `nfcube.com` / `useifsapp.com` / `shgcdn3.com` apps. Each Shopify app adds JS. Best Practices score is only 0.73, largely from these.

6. Build the content cluster around your winners. You rank for “transforming jewelry,” “jewelry redesign before and after,” “reset diamonds.” This redesign/heirloom angle is your differentiator vs. big retailers — they can’t tell that story. Write 3–5 blog posts on heirloom redesign, diamond resetting, and “what to do with inherited jewelry,” each linking to the wedding-rings and custom collections.

LOW (BACKLOG)

7. The “thorn” collection (thorn ring/earring/necklace) is a distinctive branded cluster ranking #30–70. A dedicated, content-rich `/collections/rose-thorn-collection` landing page could own this niche entirely — near-zero competition.

8. Pursue a handful of relevant backlinks (jewelry/maker/local press, “best custom jewelers” roundups). With 23 keywords and a young domain, authority is the ceiling on everything above. (*Backlink data limited — only Common Crawl tier available; connect Moz/DataForSEO backlinks for a full profile.*)

What you’re already doing better than your competitors

The site has `agents.md`, `llms.txt`, a UCP/MCP endpoint, and an agentic-discovery sitemap — Lighthouse scored agentic-browsing 0.91. As AI shopping agents (ChatGPT, shop.app, Perplexity) become buying channels, your store is purchasable by agents and your competitors’ aren’t. This is a genuine moat. Keep the product feed and `agents.md` current; it’s a real edge that won’t show in traditional rank trackers.

If you do only three things

- 1. Beef up the wedding-rings collection page — unlock 20+ keywords already on the board.**
- 2. Add review/star schema — higher CTR on every ranking you have.**
- 3. Fix the OG tags + CLS — stop leaking brand quality on shares and Core Web Vitals.**

Everything else compounds on top of those.
